PROJECTS

VanLife | ReactJS | React Router | GitHub

- An E-Commerce Site made using React Router which enables dynamic, client-side routing in React applications, providing seamless navigation without page refreshes.
- Featuring a seamless search filter for enhanced user experience and efficient data retrieval.

Energy | ReactJS | GitHub

- A React frontend project for an energy drink company, highlighting product benefits, ingredients, and company information.
- Designed an engaging user interface to enhance user experience and effectively communicate product information.

StoreAPI | NodeJS | ExpressJS | MongoDB

- RESTful API using Node.js, Express.js, and MongoDB for a Store application.
- Implemented middleware for request handling and error management to ensure robust API functionality and reliability in a production environment.
